/note="Wector: lambda Zip-Lox; Site_1: Sal; Site_2: Not; Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNA. The mRNA sources were 1) 7 quantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated etiolated seedlings; 2) tissue culture day germinated etiolated seedlings; 2) tissue culture grown roots; 3) staged plante half with 24 hour light cycle, half on 16 hr light, 8 hour dark- rosettes; 4) same plants as 3 but aerial tissue (stems; flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA inserts were directionally cloned with Sal-Not arms using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2154

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      flowering buds. DNA was purified from a crude nuclear prep using Brassica oleracea TO1000DH3 buds provided by Thosmas Osborn at the University of Wisconsin. Genomic ADNA was provided by Pablo Rabinowicz (CSHL) and the Shotgun library prepared at Washington University Genome Sequencing Center.
                                                                                                                                                       Brassica oleracea
Brassica oleracea
Eukaryota, Viridiplantae, Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicotyledons;

Patent No. 684486

Patent No. 684486

Patent No. 684486

Patent No. 684486

REBERAL INFORMATION:

APPLICANT: Xie, Qi

APPLICANT: Institute of Molecular Agrobiology, The National U

APPLICANT: Institute of Molecular Agrobiology, The National U

APPLICANT: Institute of Molecular Agrobiology, The National U

TITLE OF INVENTION: INVOLVED IN COTYLEDON AND LATERAL ROOT DEVELOPMENT

FILE REPERENCE: 2248-115

CURRENT APPLICATION NUMBER: US/09/889,926

CURRENT FILING DATE: 2001-08-18

NUMBER OF SEQ ID NOS: 2

SOFTWARE: PatentIN Ver. 2.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9850,

APPLICANT: Alexandrov, Nickolai et al.

TITLE OF INVENTION: Sequence-Determined DNA Fragments and Corresponding Polypeptid
FILLE OF INVENTION: Therby
FILLE REFRENCE: 2750-1592PUS2
CURRENT APPLICATION NUMBER: US/11/096,568A
CURRENT PILING DATE: 2005-04-01
NUMBER OF SEQ ID NOS: 34471
SEQ ID NO 4700

APPLICANT: Alexandrov, Nickolai et al.
TITLE OF INVENTION: Sequence-Determined DNA Fragments and Corresponding Polypeptidi TITLE OF INVENTION: Therby
TITLE OF INVENTION: Therby
TITLE REFERENCE: 2750-1592PUS2
CURRENT APPLICATION NUMBER: US/11/096,568A
CURRENT FILING DATE: 2005-04-01
NUMBER OF SEQ ID NOS: 34471
LENGTH: 1263
                                                                                                                                                                  Sequence 19208, A Sequence 24215, A Sequence 24215, A Sequence 21312, A Sequence 21312, A Sequence 21313, A Sequence 21313, A Sequence 211595, A Sequence 31706, A Sequence 317146, A Sequence 211595, A Sequence 211555, A Sequence 2115555, A Sequence 2115555, A Sequence 2115555, A Sequence 2115555,
